Canine Hypothyroidism

Disease Screening Protocol

Select LOW Dynamic Range
0.5–3.5 µg/dL (6.4–45.0 nmol/L)

Therapeutic Monitoring Protocol

Select HIGH Dynamic Range
2.0–7.0 µg/dL (25.7–90.0 nmol/L)

SNAP® T4 Results

- Low: <0.8 µg/dL (<10 nmol/L)
- Borderline Low: 0.8–1.5 µg/dL (10–20 nmol/L)
- Normal: 1.6–5.0 µg/dL (21–64 nmol/L)
- High: >5.0 µg/dL (>64 nmol/L)
- Therapeutic: 3.0–6.0 µg/dL (39–77 nmol/L)

Canine Screening

- Dogs with subnormal T4 results may be hypothyroid or euthyroid sick.
- Dogs with T4 results in the borderline low range may be hypothyroid.
- In dogs with consistent clinical signs, consider a free T4 and endogenous TSH to aid in confirming hypothyroidism.

Hypothyroidism Therapeutic Monitoring

For dogs on thyroid supplement, acceptable 4–6-hour post-pill total T4 values will generally fall in the upper end of the normal range or slightly above.

Note: 1 µg/dL is equal to 12.87 nmol/L. A result that falls within the borderline range of the assay should be considered ambiguous.
SNAP® T4 Testing Guide

Feline

Feline Hyperthyroidism

Disease Screening Protocol

Select

HIGH
Dynamic Range
2.0–7.0 µg/dL
(25.7–90.0 nmol/L)

Therapeutic Monitoring Protocol

Select

LOW
Dynamic Range
0.5–3.5 µg/dL
(6.4–45.0 nmol/L)

SNAP® T4 Results

Low <1.0 µg/dL (<13 nmol/L)
Normal 1.0–5.0 µg/dL (13–64 nmol/L)
Borderline High 2.5–5.0 µg/dL (32–64 nmol/L)
High >5.0 µg/dL (>64 nmol/L)

Feline Screening
Older cats with consistent clinical signs and T4 values in the borderline high range may have early hyperthyroidism or a concurrent nonthyroidal illness. In these cases, consider a free T4, a T3 suppression test or radionuclide thyroid imaging to aid in confirming the diagnosis.

Hypothyroidism Therapeutic Monitoring
Following treatment with methimazole, T4 values will generally fall within the lower end of the normal range.

Note: 1 µg/dL is equal to 12.87 nmol/L. A result that falls within the borderline range of the assay should be considered ambiguous.
SNAP® T₄ Testing Guide

Equine Hypothyroidism

Disease Screening Protocol

Select

LOW
Dynamic Range
0.5–3.5 µg/dL
(6.4–45.0 nmol/L)

Therapeutic Monitoring Protocol

Select

HIGH
Dynamic Range
2.0–7.0 µg/dL
(25.7–90.0 nmol/L)

SNAP® T₄ Results

Low <0.9 µg/dL (<12 nmol/L)
Normal 0.9–2.8 µg/dL (12–36 nmol/L)
High >2.8 µg/dL (>36 nmol/L)

Note: 1 µg/dL is equal to 12.87 nmol/L.
