

Age can affect your pet's health.

Research shows that testing seemingly healthy patients can uncover potential health issues.¹

Feline life stages²

Kitten	From birth up to 1 year old
Young adult	From 1 to < 7 years old
Mature adult	From 7 to < 10 years old
Senior	≥ 10 years

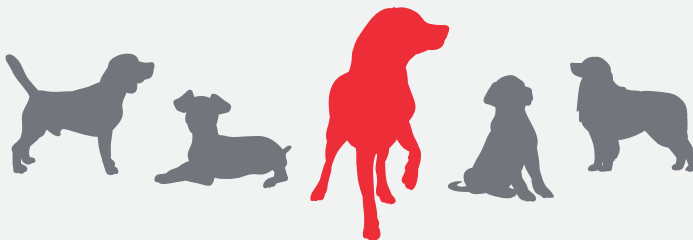

1 in 3 mature adult cats

had test results indicating impact to organ systems or physiologic processes in their preventive care lab work.

1 in 5 young adult cats • 3 in 5 senior cats

Canine life stages³

Puppy up to 1 year	From birth to cessation of rapid growth (approximately 6 to 9 months, varying with breed and size)
Young adult 1 to < 4 years	From cessation of rapid growth to completion of physical and social maturation, which occurs in most dogs by 3 to 4 years of age
Mature adult 4 to < 9 years	From completion of physical and social maturation until the last 25% of estimated lifespan (breed and size dependent)
Senior ≥ 9 years	From the last 25% of estimated lifespan through end of life

1 in 5 mature adult dogs

had test results indicating impact to organ systems or physiologic processes in their preventive care lab work.

1 in 7 young adult dogs • 2 in 5 senior dogs

(young adult 1 to < 4 years old, mature adult 4 to < 9 years old, senior ≥ 9 years old)
